

BTS Green Team Invasive Species Detention Basin Biodiversity Project - December 2022

BTS has the unique opportunity to have a local certified forester, Ms. Heather Gracie-Petty of Gracie & Harrigan Foresters, come to the school and tag invasive species. This is a time where our Green Team representatives can learn first hand from a community professional how invasive species are here on the school campus. Ms. Gracie will work in the detention basin area. Green Team students have the choice to watch from behind the fenced in area that is between the playground and the softball field or they can actually go into the fenced area of the detention basin with Ms. Gracie and supervising adults from BTS.

We have two dates for this to happen: December 8th from 10:30 - 11:00 am and December 12th from 1:20 - 2:20 pm. Students should bring boots and a hat, in case it rains those days. As a community member, you are welcome to meet at the detention basin on the school campus to learn more!
